TAYLOR FRY

We find the patterns that matter

2026 ASOC x Taylor Fry

Actuarial Case Competition

October 2026

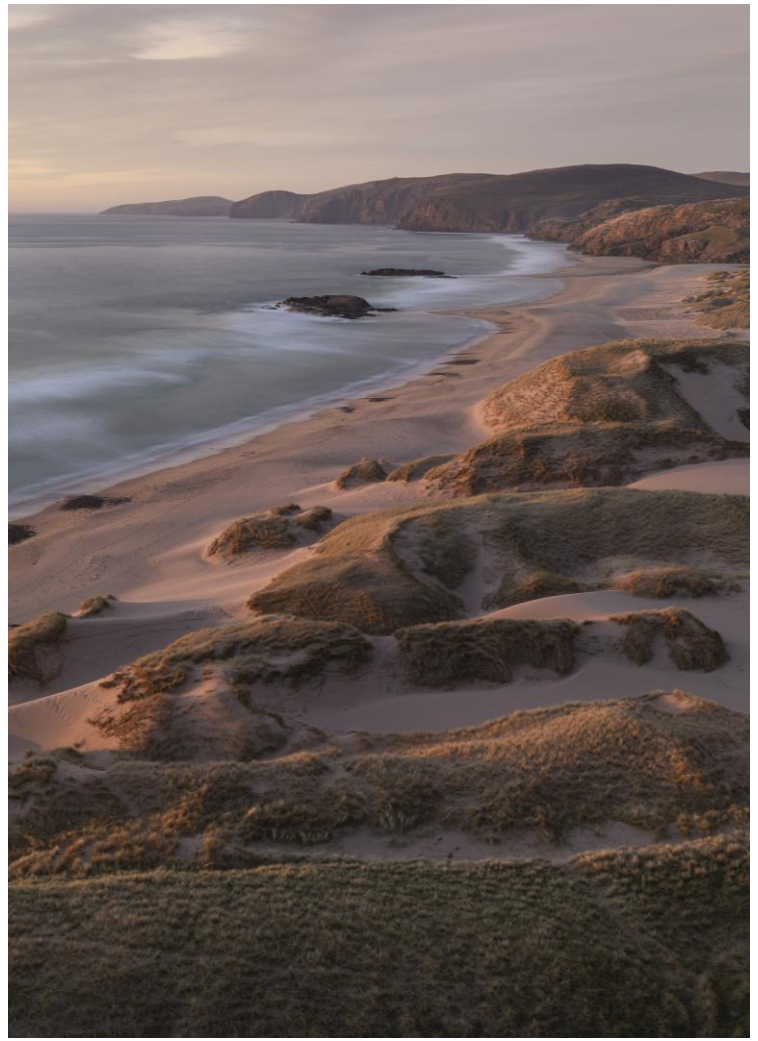

1

Background

Background

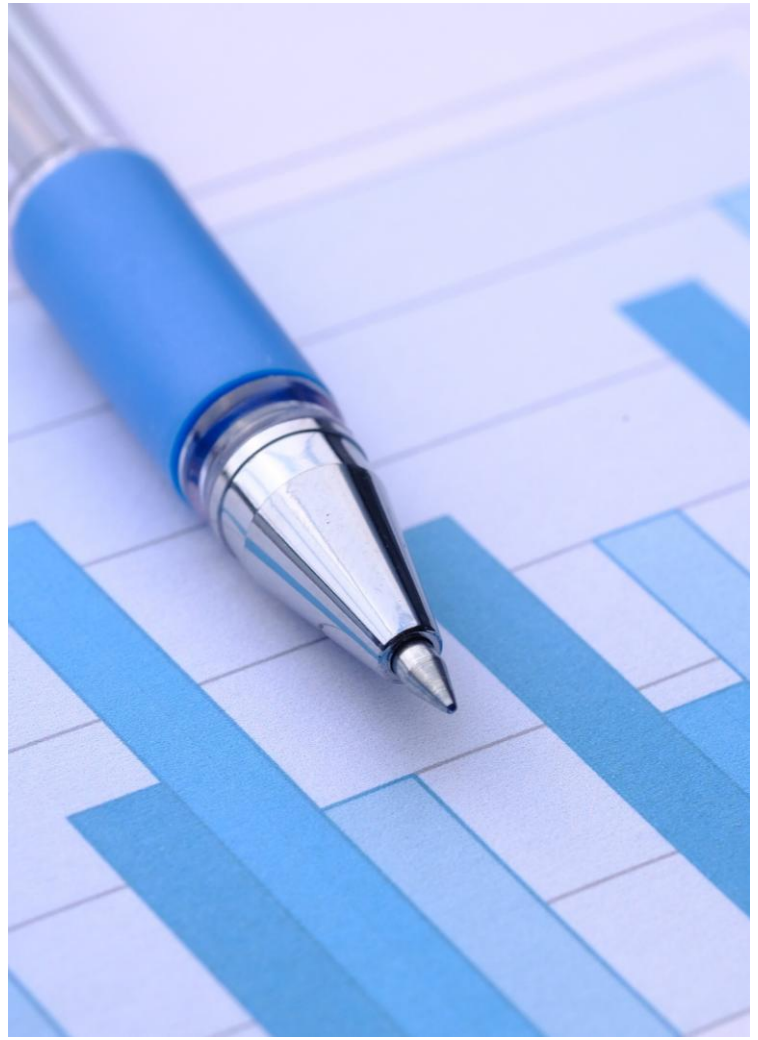

- At Taylor Fry, helping clients allocate resources under uncertainty is at the core of what we do. Governments and organisations increasingly rely on data-driven decisions to improve public safety outcomes while making effective use of limited funding.
- Taylor Fryland, a coastal country modelled after NSW, is renowned for its beaches, attracting millions of visitors each year.
- Beach safety risks vary across locations due to differences in environmental conditions, visitor numbers and existing safety measures.
- The Taylor Fryland Government currently funds:
  - Lifeguard patrols
  - Drone surveillance
  - Safety education programmes
  - Rescue infrastructure.
- Despite these investments, incidents continue to occur, particularly at beaches with limited safety coverage.

Disclaimer: All data and information in this case competition is completely fictional and has been created for learning purposes only. It does not reflect real NSW beaches or the views of the NSW Government.

Client objective

- The Taylor Fryland Government is considering an **additional** $2 million annual investment in beach safety and wants to maximise the impact of this funding.
- Your objective is to develop an evidence-based strategy that **minimises the number of severe beach incidents** across Taylor Fryland beaches.
- Your recommendations will be used to inform next year's future funding priorities and presented to a panel of non-technical government officials.

2

Your task

Task 1

Task 1: The Government of Taylor Fryland is preparing next year's beach safety budget and requires an understanding of future beach safety demand. Based on the data provided, estimate beach safety incidents across Taylor Fryland beaches next year.

Consider the following questions:

1. Estimate the expected number of beach safety incidents by severity across Taylor Fryland beaches next year and identify where and when they are most likely to occur.
2. Assess the factors that influence beach safety incidents and severe incidents. This includes beach conditions as well as existing safety measures (e.g. lifeguards, patrol hours and drone surveillance).

Task 2

Task 2: The Government of Taylor Fryland has secured an additional $2 million per year for beach safety initiatives and wants recommendations on how this should be used to improve beach safety.

Consider the following questions:

1. Based on the data provided and your response to Task 1, recommend how the additional funding should be allocated across beaches and safety initiatives **to minimise severe incidents.**

2. Explain why your recommended investment strategy represents the best use of public funds, including key implementation considerations and why alternative strategies were not selected.

Data provided

The Taylor Fryland Government have provided you with the following datasets:

1. **Beach_monthly:**
   Monthly data from 80 beaches from 01/09/2016-31/08/2026. It includes beach characteristics, visitor volumes, environmental conditions and safety resources.

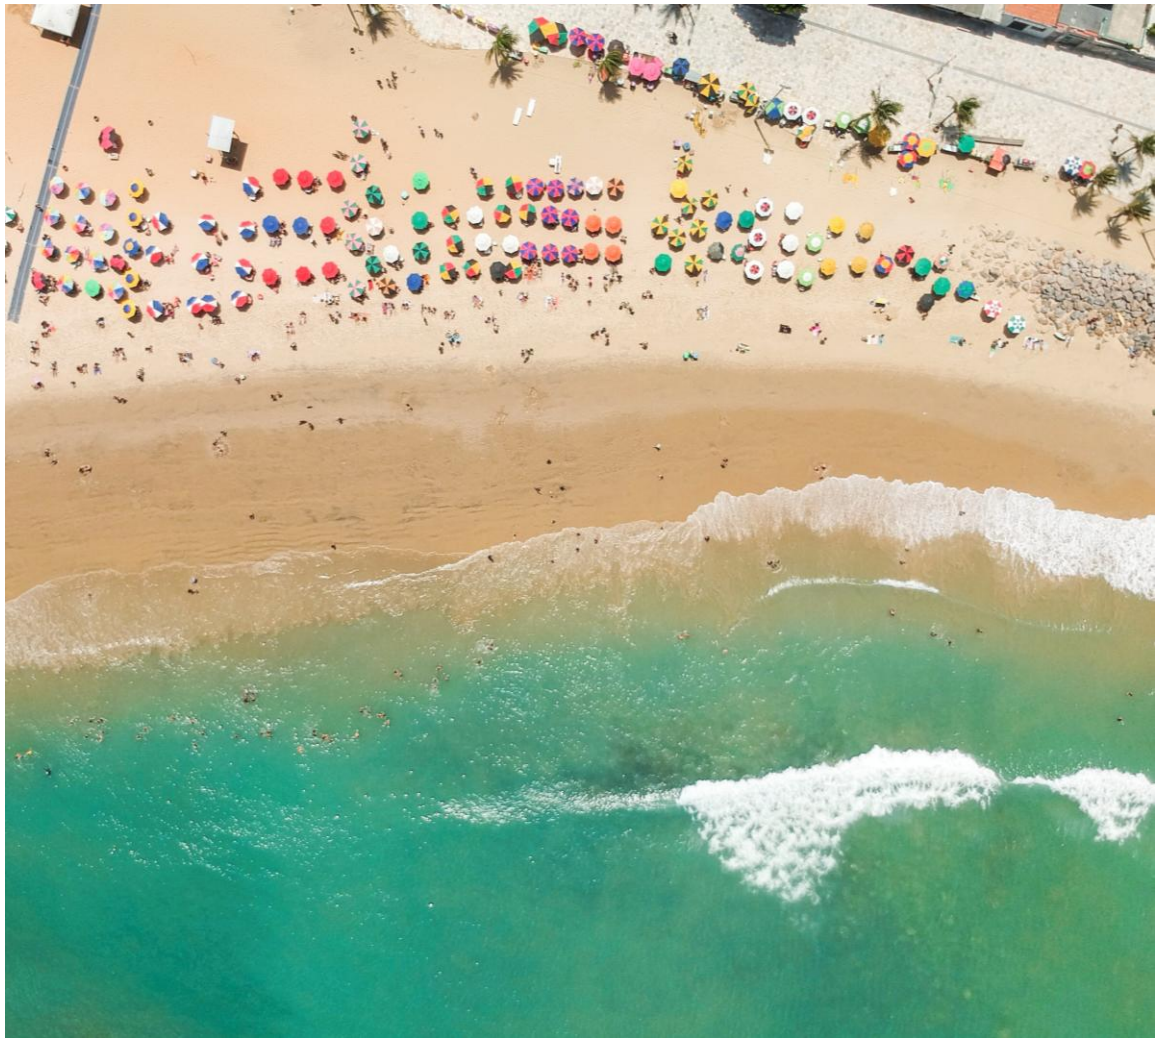

2. **Incidents:**
   Incident-level records from 01/09/2016-31/08/2026, including incident cause, severity, visitor characteristics and response information.

3. **Pricing:**
   Costs and implementation information for a range of beach safety initiatives

Please see the provided data dictionary for more information on the datasets provided.

Additionally, you should explicitly state:

- The assumptions you have formed for your responses
- Any limitations that might affect your analysis.

3

Submission details

How do you enter?

What's required?

- Teams are required to prepare a 10-minute presentation in the form of a slide pack
- Teams selected for the semi finals and finals will present to a judging panel of ASOC and TF representatives
- Each presentation will be followed by Q&A from the judges.

Where do you send your submission?

- Email your response to careers@asoc.unsw.edu.au
- Attach your response with the subject *Taylor Fry Case Competition – [Team Name]*
- Include your team's name and members in the body of your email.

What's the deadline? As specified by UNSW ASOC

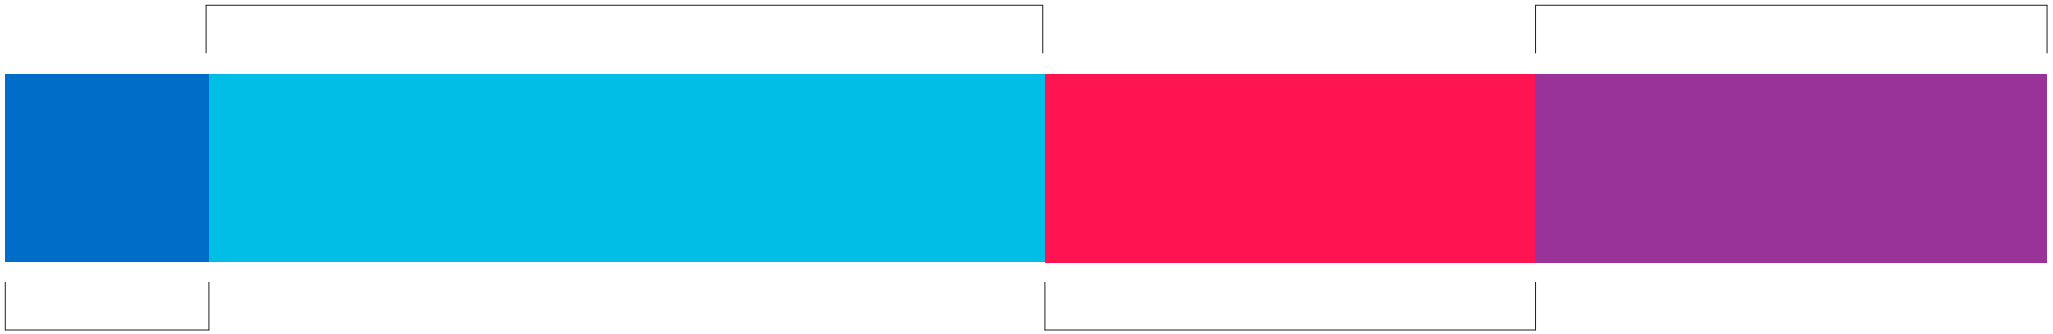

Assessment criteria

Your presentation will be judged using the following assessment criteria:

Task 1 - Explanation and justification of analysis (45%)
Clear explanation of how results were derived, including reasonable analysis and well-justified conclusions.

Style of presentation (25%)
Effective slides.
Engaging and coherent speakers.
Thoughtful responses to Q&As.

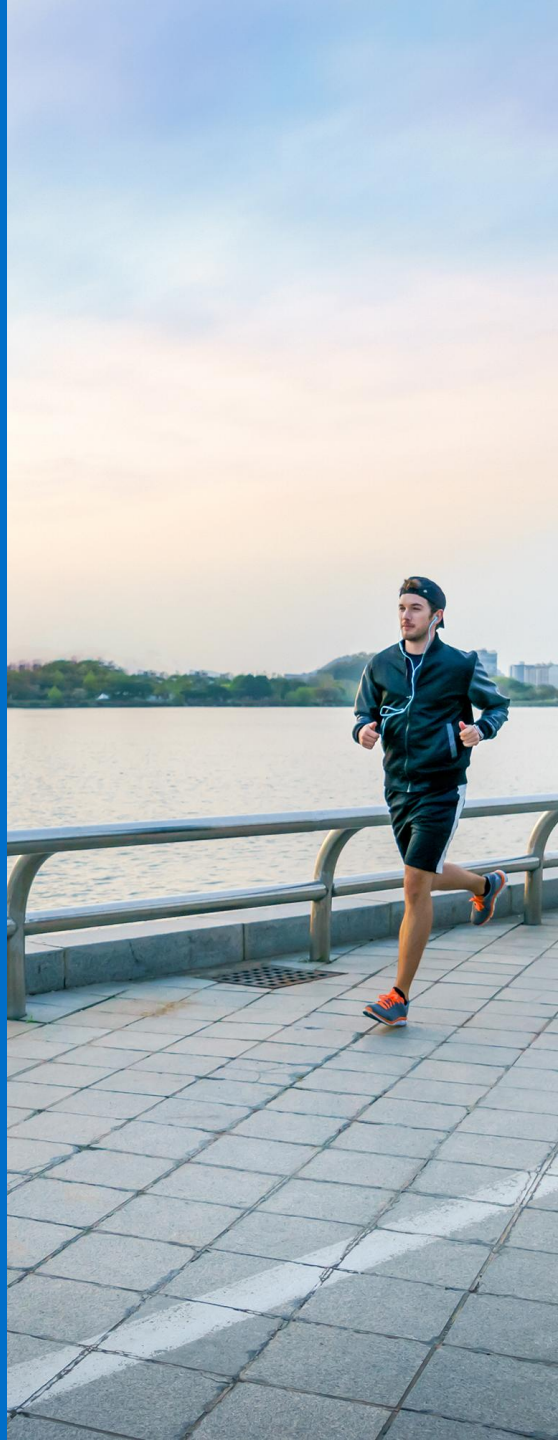

Task 1 and 2 - Clarity of solutions (10%)
Clear solutions for estimating beach incidents and proposed interventions.

Task 2 – Explanation and justification of analysis (20%)
Clear explanation of how results were derived, including reasonable analysis and well-justified conclusions.

Tips and prizes

Tips and advice

Use of AI is permitted

Use of AI is allowed but we still expect problem solving and clear evidence of your reasoning.

Submissions that rely heavily on AI output will be obvious.

Clarity is key

Your submission should be concise, self-contained, and easy to understand.

Focus on presenting your ideas clearly and avoid unnecessary elaboration.

Prepare for a range of questions

You may be asked to elaborate on qualitative and/or quantitative insights, technical implementation, or your overall approach.

Make sure you can justify your decisions and methodology.

There is no single correct answer

There is no one “right” solution. We will award creativity, logical reasoning, and a well-rounded understanding of the problem.

Note you are not expected to demonstrate fourth year level knowledge/ methods.

Tips and advice

Answer the question

Respond directly to the problem at hand.

Avoid going beyond the scope of the question.

No need for external research

Please rely solely on the information provided and do not use external datasets or literature.

Where information is not specified, apply reasonable assumptions and logic.

Any software can be used

You are free to use any tools you are comfortable with, including R, Python, Excel, MATLAB, etc.

Opportunity for feedback

You will receive feedback following the semi-final round.

A revised submission will be permitted for finalists, based on that feedback.

Prizes

Runner-Up team

$100 voucher

Provided as one voucher or split equally among team members

Winning team

$200 voucher

Provided as one voucher or split equally among team members

Fast-tracked past the first shortlisting phase of our graduate recruitment process, in the year that you apply
